12. Write the dual of the following LP problem and verify that the dual of the dual is primal.
Minimize $6x_1 + 3x_2 - 2x_3$ subject to
$3x_1 + 4x_2 + x_3 \geq 5, 6x_1 - 3x_2 + x_3 \geq 2$ *and* $x_1, x_2, x_3 \geq 0.$

15. What you mean by goal programming.
A factory can manufacture two products A and B. The profit on a unit of A is Rs. 80 and of B is Rs. 40. The maximum demand of A is 6 units per week and B is 8 units per week. This manufacturer has set a goal of achieving a profit of Rs. 640 per week. Formulate the problem as goal programming and solve it.
